

# AI - GPT

Monday, April 15, 2024 2:38 PM

## What is GPT 3

GPT 3 Stands for Generative Pre Trained Transformer 3.  
It's 170 Billion parameter models, its trained on this amount of data.

## What is the Limitation of AI

AI is nothing but an Algorithm running against set of trained data, You provide a data set and let computer run a program against it to provide an answer from that limited data set.

This type of AI is called generative AI as it is generated from small set of dataset and in order to train it needs a time and most of time data provided is very limited. And can not provide all the answers that are out of scope of the fed data set.
